Frames

- **Constructed from high impact plastics** -- The high impact plastics make the DE hoop indestructible and reduces vibration through the hoop.
- **Brass inserts for all screws** -- Molding in brass inserts reduces the chance for screws to loosen by providing greater holding power.
- **Light texture on hooping surface area** -- Texturing the hoop's surface provides better holding of garment during sewing for better registration.
- **Extra height** -- The additional height of the hoop also helps in holding thicker, hard-to-hold garments.
- **Directional guides** -- Directional guides make center designs effortless.

Adjusting Rings

- **Constructed from high impact plastics** -- The high impact plastic makes the DE ring of the hoop unbreakable.
- **Thumb screw is larger and longer than our competitors'** -- The larger size of the thumbscrew provides more torque, so it is easy to adjust and open wide for thick garments.
- **Wide space for thumb screw adjusting** -- The extra space for reaching the thumb screw also aids in adjusting the ring.

Metal Clips

- **Extra long clips** -- The length of the clips aid in reducing vibration through the hoop.
- **Screws with lock washers** -- Attaching the clips to plastic with screws and lock washers prevents the clips from vibrating loose.
- **Zinc plating with clear chromate finish** -- Zinc provides a harder surface that reduces wear, adding the life span of the clip.
